WHAT IS CLAIMED IS:

A camera comprising:

5

an image pickup optical system for forming
an optical image of an object;

a photoelectric converting device for converting the optical image to an electric signal;

an optical device disposed between the image pickup optical system and the photoelectric converting device; and

vibration applying means for vibrating the optical device.

- 2. A camera according to claim 1, further comprising a holding member which seals between the optical device and the photoelectric converting device.
- 3, A camera according to claim 1, wherein the vibration applying means applies one of primary bending standing-wave vibrations and oval vibrations to the optical device.
